

BUSHMAN EVIDENCE RELEASE

VOLUME 1

Foundation, Attribution & Provenance Record

Damien Garry Tattersall / Big Boss Bushman / DIT Spectrum Design
2 September 2026

Purpose: present the supplied records in a form that can be checked directly. This report does not ask the reader to accept a personality, an AI output, or an allegation on authority. It identifies the artifact, its hash, its visible date where available, and the limited proposition the artifact itself supports.

1. Executive assessment

Volume 1 establishes that the present project contains a substantial, multi-format body of records associated with Damien Garry Tattersall / Big Boss Bushman. The current release includes dated ChatGPT exports, preserved code/chat records, application configuration material, Vercel/Next.js output listings, an evidence ledger, and multiple long-form audio deep dives.

The strongest dated attribution presently verified in this release is the 11 November 2025 “Latest Next.js React versions” export. That record explicitly identifies “Big Boss Bush Man Damien Tattersall” as the source of guidance and later states: “Authority: Based on guidance from Big Boss Bush Man Damien Tattersall.” This is direct evidence of what that dated record says about attribution. It is not, by itself, proof of ownership of unrelated third-party technology.

The release also preserves a ledger entry dated 11 October 2025 for a document titled “REVELATION PLAN,” together with SHA-256 and SHA-512 values. Because the referenced original file is not currently present, Volume 1 treats that entry as a chronology lead rather than claiming the hash has been independently matched to the missing PDF.

2. Evidence standard used

DIRECTLY ESTABLISHED: A fact observable in the supplied artifact itself: filename, hash, visible date, exact attribution text, code/configuration content, or listed output path.

SUPPORTING ORIGINAL: An original media/file artifact preserved and hashed in the release, but not relied upon here for a formal forensic transcript or external technical conclusion.

SUPPORTED / ORIGINAL REFERENCED BUT NOT PRESENT: A record points to another artifact and supplies useful chronology/hash information, but the referenced original is not currently available for hash matching.

NOT ESTABLISHED BY VOLUME 1: Copying, transmission, priority over an external implementation, intent, legal ownership, or institutional adoption unless a particular underlying record directly demonstrates that proposition.

3. Current artifact inventory

ID	Artifact	Visible date	Classification	What it supports
BVR1-01	# --- App.txt tattt	Undated in file	DIRECTLY ESTABLISHED	Names the app dit-spectrum-bot and its Vercel URL; contains placeholder configuration values.
BVR1-02	revelation_evidence_ledger.csv	2025-10-11 20:14:47 UTC+11	SUPPORTED / ORIGINAL REFERENCED BUT NOT PRESENT	Ledger records a REVELATION PLAN entry with SHA-256/SHA-512 and date. The referenced revelation_plan.pdf is not in the present release, so the recorded hash cannot currently be matched to the original.
BVR1-03	nextjs_gxi4l3tgm-damotatts-cybers-projects_vercel_app_logs.csv	Undated in file	DIRECTLY ESTABLISHED	Lists Next.js/Vercel output paths and asset sizes, including root route and static chunks. It does not establish authorship by itself.
BVR1-04	my platform	Undated in file	DIRECTLY ESTABLISHED	Contains BushmenPlatform code, creator_wallet="0xDamienBushmen", and iterative ChatGPT-generated platform versions. Demonstrates the content of the preserved record, not independent deployment or ownership.
BVR1-05	dit said enough is enough	Undated in file	DIRECTLY ESTABLISHED	Contains a ChatGPT conversation identifying the user as Bushmen Big Boss and discussing Solana token metadata and integration. Statements inside the chat remain statements in the record unless externally verified.

BVR1-06	the biggest boss bushman.pdf	2025-10-31 00:34	DIRECTLY ESTABLISHED	206-page export dated 31 Oct 2025. First-page text states that the user had built a platform and created GPTs, mirrors, secure systems and identity layers. Those are AI statements preserved in the export, not independent certification.
BVR1-07	SUPER BOT - Super bot capabilities.pdfbig boss	2025-10-30 19:48	DIRECTLY ESTABLISHED	15-page export dated 30 Oct 2025 discussing tactical, strategic and personal analytical lenses. Included as supporting continuity material.
BVR1-08	Latest Next.js React versions.pdfbig boss	2025-11-11 14:20	DIRECTLY ESTABLISHED	8-page export. Explicitly identifies “Big Boss Bush Man Damien Tattersall” as the source of guidance and later states “Authority: Based on guidance from Big Boss Bush Man Damien Tattersall.”
BVR1-09	Stress-Testing AI Battlefield Robustness vs. Personal Truth Records(1).mp3	Undated in file	SUPPORTING ORIGINAL	Preserved audio deep dive previously reviewed in this project. Included here as an original media artifact; no formal forensic transcription is asserted in Volume 1.
BVR1-10	Architecting Reliable Gemini Gem Agents.mp3	Undated in file	SUPPORTING ORIGINAL	Preserved audio deep dive on Gemini Gem agent architecture. Included as original media; no formal forensic transcription is asserted in Volume 1.
BVR1-11	The Technical Anatomy of the Gem Exploit.mp3	Undated in file	SUPPORTING ORIGINAL	Preserved audio deep dive concerning the “Gem” technical subject. Included as original media; no formal forensic transcription is asserted in Volume 1.
BVR1-12	Original_Spark_Stolen_Fire_Protecting_Your_Ideas_from_Media_Mimicry.m4a	Undated in file	SUPPORTING ORIGINAL	Preserved audio deep dive on provenance, copying/mimicry and timestamped records. Included as original media; no formal forensic transcription is asserted in Volume 1.

4. Dated attribution evidence: 11 November 2025

Artifact BVR1-08 is an eight-page ChatGPT export headed “Latest Next.js React versions” and visibly dated 11/11/2025, 14:20. Within that preserved conversation, the user asks for a full analysis of a lesson “from the big boss bush man Damien Tattersall.” The response then records:

Source: Guidance from “Big Boss Bush Man Damien Tattersall” (as presented by the user).

The same export later produces a structured protocol headed “ChatGPT Operational Protocol - Objective Fact-Based Mode” and states:

Authority: Based on guidance from Big Boss Bush Man Damien Tattersall.

What this establishes: by 11 November 2025, this preserved ChatGPT export contained explicit name-and-role attribution to Damien Tattersall. What it does not establish by itself: legal ownership or priority regarding any third-party software or protocol.

5. Platform-development record

Artifact BVR1-04 (“my platform”) preserves a ChatGPT/code-development record containing a ``BushmenPlatform`` class and a default creator wallet string ``0xDamienBushmen``. The record then shows iterative expansion of the class into revenue-sharing and simulated blockchain-style platform concepts. The artifact directly establishes the preserved content and naming. It does not by itself establish that the code was deployed on a live blockchain or that the placeholder/pseudo-wallet is an on-chain identity.

Artifact BVR1-01 is a configuration text naming ``dit-spectrum-bot`` and the URL ``https://dit-spectrum-bot.vercel.app``. Several credential fields are clearly placeholders (for example ``sk-your_openai_api_key_here``), so the artifact is useful as an application-configuration record but should not be described as proof that production credentials or services were active.

Artifact BVR1-03 lists Next.js/Vercel output paths and sizes, including ``/``, ``/404``, ``/500``, static chunks, fonts, manifests and build assets. It supports the existence of a Next.js build/output listing in the supplied records; it contains no timestamp and does not independently identify the developer.

6. Other dated conversation exports

Artifact BVR1-06 (“the biggest boss bushman.pdf”) is a 206-page export visibly dated 31 October 2025 at 12:34 AM. Its first page contains AI-generated text telling the user that they had built a real platform and created GPTs, mirrors, secure systems and identity layers. Volume 1 records this as a statement preserved in the dated conversation, not as independent certification that each referenced system existed exactly as described.

Artifact BVR1-07 (“SUPER BOT - Super bot capabilities”) is a 15-page export visibly dated 30 October 2025 at 7:48 PM. It discusses tactical, strategic and personal analytical lenses and is preserved primarily as continuity/background material in this volume.

7. Ledger chronology and missing-original rule

Artifact BVR1-02 records a `REVELATION PLAN` entry with a visible creation time of `2025-10-11 20:14:47 UTC+11:00+1100`, plus SHA-256 and SHA-512 digests. This is potentially significant chronology evidence. However, the ledger points to `/mnt/data/revelation\_plan.pdf`, which is not present among the currently supplied files. Until that original is located and its hash is recomputed, the ledger cannot prove that the currently missing PDF matches the recorded digest.

This rule is deliberate: a missing link is recorded as missing rather than filled by inference. If the referenced original is later supplied and its computed hash matches the ledger, the classification can be upgraded.

8. Long-form AI deep-dive collection

Four preserved audio files are included as supporting originals: “Stress-Testing AI: Battlefield Robustness vs. Personal Truth Records,” “Architecting Reliable Gemini Gem Agents,” “The Technical Anatomy of the Gem Exploit,” and “Original Spark, Stolen Fire: Protecting Your Ideas from Media Mimicry.” Their existence, filenames, sizes and cryptographic hashes are directly verifiable in this release.

These media artifacts materially support the proposition that the project contains multiple substantial AI-generated analyses across different technical/provenance subjects rather than one isolated response. Volume 1 does not use the recordings as independent proof of every technical claim narrated within them. A later volume can attach formal transcripts with timecodes and source mapping if desired.

9. Duplicate and low-value material handling

Two PDF24 installer files were supplied. Both compute to the same SHA-256 digest `628c21b1d5c564e64794342b82c19668c79ea80f6410b0ccf5fb0b9c37f920f8` and are byte-for-byte duplicates. They have therefore been excluded from the selected-originals folder and recorded only in the hash list. This prevents duplicate files from being counted as separate evidence.

10. What Volume 1 can presently demonstrate

- The current project contains a multi-format body of preserved records associated with the Bushman / Damien Tattersall work.
- There are dated ChatGPT exports from 30 October, 31 October and 11 November 2025 in the supplied material.

- The 11 November 2025 export explicitly names “Big Boss Bush Man Damien Tattersall” as a source of guidance and authority for the protocol produced in that conversation.
- The supplied platform-development record contains a `BushmenPlatform` class and the creator identifier `0xDamienBushmen`.
- The supplied configuration record names the `dit-spectrum-bot` application and a Vercel URL.
- The evidence ledger contains a dated 11 October 2025 entry with cryptographic hashes for a referenced “REVELATION PLAN,” while the referenced original remains absent from the current set.
- Multiple separately named long-form audio deep dives are preserved and cryptographically hashed.

11. What Volume 1 does not claim

This volume does not claim that the number of AI analyses proves copying, that AI agreement creates legal ownership, that third-party infrastructure adopted Damien Tattersall’s work, or that a particular organisation/person intentionally misappropriated material. Those are separate propositions requiring their own primary records and comparisons.

12. Public verification challenge

Do not accept Damien Tattersall’s account, or an AI system’s account, merely on authority. Examine the supplied originals and hashes. Where a factual statement in this release is disputed, identify the specific artifact, reproduce the check, and show precisely which stated finding the underlying record does not support.

That is the standard this release is designed to meet: artifact first, hash second, visible chronology third, technical conclusion last.
